

Women Safety

TEAM - Control Patrol

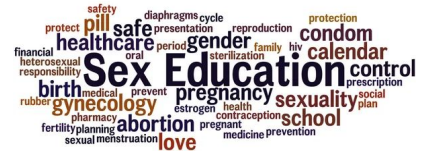

ARE WOMEN SAFE IN INDIA???

- In India, some woman is faced with rape in every 20 minutes.
- On an average, Seventy-seven rape cases are reported.
- It is consistently increasing at an alarming rate.

How we can be a solution to this problem?

- We should teach children about sex education at very initial stage.
- Fear of Laws is not enough to stop crime over women. We have to make them understand about the things.
- We have to make sex education and discussions so comfortable so that these topics don't offend youngsters.

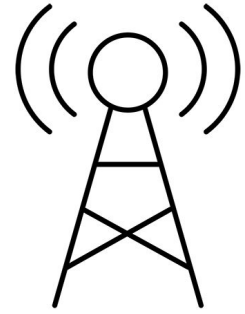

Safety Equipments in the market

- Pepper Spray.
- Apps which start alarming when phone screen is tapped 3-4 times simultaneously.
- Apps which send live location to the emergency contacts when power button is pressed for 3 seconds.
- Foldable knife.

Disadvantages of these Safety Equipments

- There is not enough time to take these equipment out of the bag and use it.
- Because of the sound, rapist got alert and he tries to break that device or throw it away from them.
- Many apps are there to send live location but these cases are done in the areas where there is no network.

Safety Band

- We can design a bracelet or a waist band.
- In which we will insert tracking chip. Whenever someone presses it 3-4 times simultaneously.
- That sensor will enable live location tracking and live location of that girl is sent to all the nearby police stations.
- Police will track that device and rescue that girl.

Advantage of this band over other Safety Equipments

- It is a wearable accessory, It is always with the person.
- It will not beep or make a sound so that rapist would not get alert.
- It will provide the live location of the girl that is to be rescued.
- It will be based on near-earth satellites. So that there will no issue of the signal.
